

Stockholm October 25th, 2019, Nanol Technologies Oy (Nanol Technologies) has previously announced that The Government of Åland, is using Nanol® in three (3) "new" vessels, that means all of the fleet. /total 5 ships)

After successful use of Nanol® on M/S Skarven and M/S Alfågeln (the engines on board are Wärtsilä 2 x 9L20 and Wärtsilä 1 x 16V22) for almost two years (2), The Government of Åland, (Ålands Landskapsregering), decided to use Nanol® and expand to their remaining fleet, consisting of three (3) more ships earlier this year.

There has been a direct procurement process during 2019, which led to a decision to expand the usage of Nanol®.

"Since, the results from the vessels on M/S Skarven and M/S Alfågeln running on Nanol® have been very good. We have observed a fuel oil saving of more than 3% in the engines using Nanol®. M/S Alfågeln was drydocked in September 2019 including an overhaul of the main engine. We could clearly see less wear and tear in the main engine", says Sten Schauman, Procurement Officer, Department of Infrastructure, Government of Åland.

"The results are to us remarkable and we have therefore expanded our agreement with Nanol Technologies for the next 2+2 years starting from 2019 and running on five (5) different ferries in our archipelago traffic. This is part of our work helping to achieve our goals in minimizing the usage of fossil fuels for a sustainable future", continues Sten Schauman.

"We are very happy that The Government of Åland has taken the step to use Nanol® for the rest of their fleet as well. This is a great step in the right direction for improved health of the marine environment in the Baltic sea and I hope more counties and organizations will follow as every drop counts to lower our carbon footprints today", says Tanja Ilic, Managing Director, Nanol Technologies.

About The Government of Åland

About Nanol Technologies

In Åland, a total of just over 1,200 kilometers of road is owned by The Government of Åland. Lin ferries are an extension of the roads and bind Åland on six different routes. There are free-standing ferries along four main lines and three smaller lines. The Government of Åland manages the operation and maintenance of roads, bridges, harbours and ferries, among other things. We also handle planning, design and procurement when there is a need for, for example, new roads and bridges or staff to the ferries.
